

## Life Cycle Statement

At all stages during the procurement process, Fleck shall consider a sustainable procurement policy.

As Fleck do not carry out a design function, we can only influence our clients where practicable to do so. At all times we shall keep our clients informed of any beneficial alternatives and the latest technological advances.

During the Production process Fleck shall at all times consider and adopt the best available techniques (BAT) to cause the least affect on the environment.

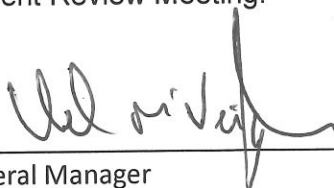

Fleck shall adopt a policy to ensure the most efficient method of transportation of product, services and resources.

Fleck use only metal material in their provision of product and service, where practicable to do so the company shall provide clients with information on end of product life disposal options.

Waste minimisation shall be considered and adopted where possible at every stage of the production process. An example of an improved product could be the use of Stainless Steel instead of mild steel with a painted finish.

Fleck shall apply the principles of the Waste Hierarchy in instances where waste exists.

This policy shall remain under review and shall be discussed as part of the annual Management Review Meeting.
